Figure 1 illustrates the step-by-step construction of a 3D model of a protein-ligand complex. The diagrams show the progression from a simple ligand (1) to a fully assembled complex (10). The steps involve adding atoms (represented by spheres) and bonds (represented by lines) to the existing structure. The final model (10) shows the ligand bound to a protein, with the protein's structure represented by a grey mesh and the ligand by a colored sphere.

1. The first step in the process of developing a new product is to identify a market need.	2. The second step is to conduct a feasibility study to determine if the product is viable.	3. The third step is to develop a business plan that outlines the financial aspects of the product.	4. The fourth step is to secure funding to develop the product.	5. The fifth step is to develop a prototype of the product.	6. The sixth step is to conduct a pilot test to evaluate the product.	7. The seventh step is to launch the product into the market.	8. The eighth step is to monitor the product's performance and make adjustments as needed.	9. The ninth step is to promote the product through various marketing channels.	10. The tenth step is to evaluate the overall success of the product and plan for future developments.
