Duration

Session: INDIA

<p>1. The first step in the process of developing a new product is to identify a market need. This involves conducting market research to determine what customers want and need. Once a need is identified, the next step is to develop a concept that addresses this need.</p>	<p>2. The second step is to develop a business plan. This involves determining the costs of production, the pricing strategy, and the marketing plan. A business plan is essential for securing financing and for guiding the development of the product.</p>	<p>3. The third step is to develop a prototype. This involves creating a small-scale model of the product that can be used to test the concept and to demonstrate the product to potential investors and customers.</p>	<p>4. The fourth step is to conduct a pilot test. This involves producing a small quantity of the product and selling it to a limited number of customers. This allows the entrepreneur to gather feedback and to make adjustments to the product and the marketing plan.</p>	<p>5. The fifth step is to launch the product. This involves producing a larger quantity of the product and selling it to a wider market. The entrepreneur must monitor sales and customer feedback closely to ensure that the product is meeting the market need.</p>	<p>6. The sixth step is to evaluate the success of the product. This involves comparing actual sales and profits to the goals set out in the business plan. If the product is successful, the entrepreneur may consider expanding the product line or developing new products.</p>	<p>7. The seventh step is to develop a long-term strategy. This involves determining the future direction of the business and the steps that will be taken to achieve this direction. A long-term strategy is essential for the success of any business.</p>	<p>8. The eighth step is to implement the long-term strategy. This involves putting the strategy into action and monitoring progress. The entrepreneur must be flexible and willing to make adjustments as needed to ensure that the strategy is effective.</p>	<p>9. The ninth step is to evaluate the long-term strategy. This involves reviewing the progress of the business and the effectiveness of the strategy. The entrepreneur must be willing to make changes to the strategy if it is not working.</p>	<p>10. The tenth step is to develop a new product. This involves repeating the process from step 1 to step 10. The entrepreneur must be constantly looking for new opportunities to grow the business.</p>

Figure 1 illustrates the experimental design, showing a sequence of trials. Each trial consists of a fixation cross (0.5s), a stimulus (0.5s), and a response period (0.5s). The stimulus is a 2x2 grid of colored squares. The response period is a box with a red 'X' and a green 'X'. The trials are grouped into two sets of five trials each, labeled 'Set 1' and 'Set 2'. The trials are numbered 1 through 10.
